## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 3 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 1 discloses an embedded variable resistor tuned by adjusting the resistance by laser-trimming. Claim 3, which is dependent on 1, states the same.

2. Claim 7 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 4 discloses an embedded variable passive component tuned by adjusting the resistance by laser-trimming. Claim 7, which is dependent on 4, states the same.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-13 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Berryman et al. (US 6,583,791). Regarding claims 1-13 and 16, Berryman teaches a red, blue, and green LED electrically connected in series to an embedded variable resistor [14] which is tuned by laser-trimming [column 9, lines 1-4]. It is known in the art that a resistor

is a passive circuit element. It is also known that the brightness of the LED will be affected by the value of the resistor, which is laser-trimmed. Berryman teaches the resistor being printed onto the substrate [column 8, lines 32-33].

In regard to claims 14 and 15, Berryman teaches variable active components [ $SW_R$ ,  $SW_G$ ,  $SW_B$ ] that are MOS transistors [column 4, lines 65-68].
